32 x 76 (216)	27	22	22	700	130

Helpful Notes:

Panel counts based on average heights of 32" or lower. To determine average height, take several measurements from ground to bottom of home siding, at each corner and middle of long sides, add up all measurements and divide by total number of measurements, then add 1 inch. (Example: 30 + 34 + 29 + 27 + 32 + 30 = 182 inches, divided by 6 measurements = 30.33 inches, plus 1 inch = 31.33 average height. *Decks require extra materials. For decks, add the lengths of the two sides running out from home to total lineal feet, and refer to chart. *Actual panel width: 32.5". Panels taller than 48" require interior bracing. *Use cornice vents for ventilation. We recommend one vent per 10 lineal feet.

For ground spikes and tin snips see page 73.
 For screws see page 76.
